- Next day shipment on all stock units.

Cartridge Heaters

Metric EB Cartridge

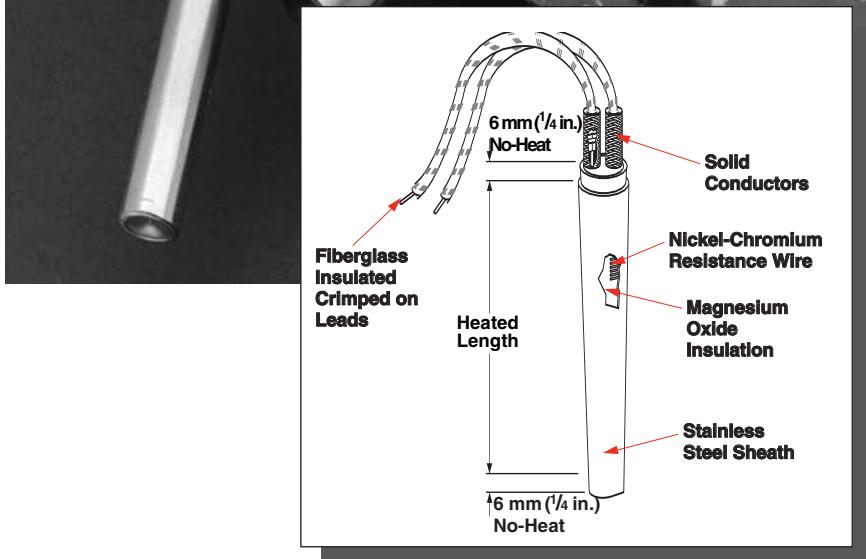

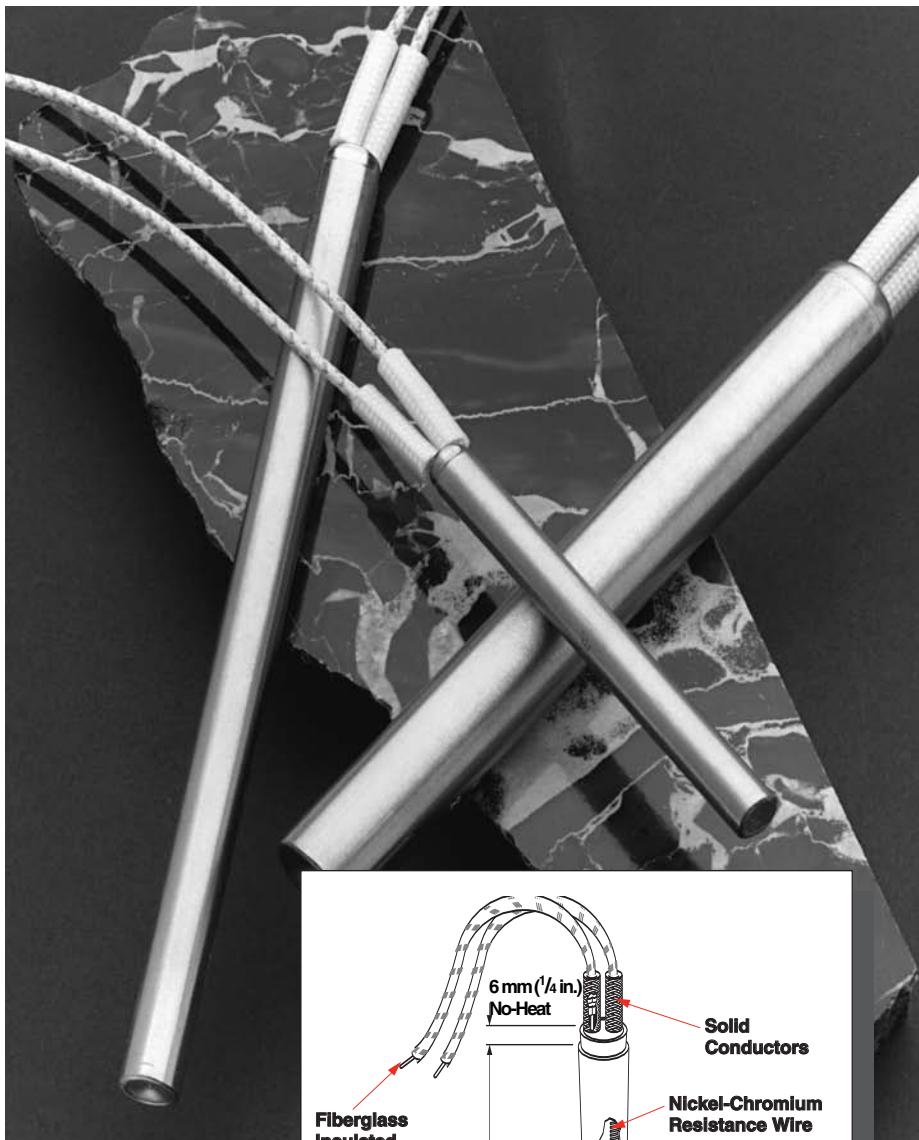

The Watlow EB cartridge heater is a proven performer like the metric FIREROD®. That's because the same quality materials go into its construction; MgO insulation, nickel-chromium resistance wire, silicone-fiberglass insulated lead wires. The only difference is that the EB cartridge is packaged in a more economical design. Instead of having the high watt density capabilities of a metric FIREROD, it's made for medium watt density applications.

Performance Capabilities

- Part temperatures to 600°C (1100°F)
- Maximum watt density to 30 W/cm² (190 W/in²)
- Maximum voltage to 480V~(ac)

Features and Benefits

- **Magnesium oxide insulation**, compacted to the proper density, results in high dielectric strength and contributes to faster heat-up.
- **Nickel-chromium resistance wire**, precisely wound through the heated length, assures even, efficient distribution of heat to the sheath.
- **Metallurgically-bonded conductor pins**, crimp-connected to the resistance wires, ensure trouble-free electrical continuity. This process provides lead flexibility just 8 mm ($\frac{5}{16}$ inch) from the end of the heater.
- **Flexible stranded wires**, with silicone-fiberglass sleeve, insulate the wires to temperatures of 250°C (480°F).
- **Optional lead end with silicone rubber seal** protects the leads against moisture and other contaminants.

- **VDE component recognition** to 230V~(ac) according to VDE 0721 part 1/3.78 and part 2/3.78 Section E in connection with VDE 0720 part 1/11.74.

Applications

- Plastic injection molds, dies and sealing jaws
- Hot melt systems, labeling
- Industrial and textile manufacturing equipment

Maximum Allowable Watt Density

Both the Maximum Allowable Watt Density metric and inch-base charts will tell you either the hole fit or recommended watt density in relationship to part temperature. Enter the chart with either known variable, part fit in hole dimension or watt density. Then find the part temperature by reading up or over on the chart. The part temperature curves shown are measured 13 mm ($\frac{1}{2}$ inch) from the heater in a mild steel block. For stainless steel blocks, enter the graph with a fit of 0.04 mm (0.0015 inch) larger than actual. For aluminum and brass blocks, enter the graph with a temperature 55°C (100°F) above actual block temperature.

On-Off Cycling: On-off cycling shortens heater life. If the heater cycles more than once per hour, multiply the watt density, shown on the chart, by 0.8 to determine the maximum allowable watt density for the application. If the heater cycles more than once a minute, multiply by 0.7.

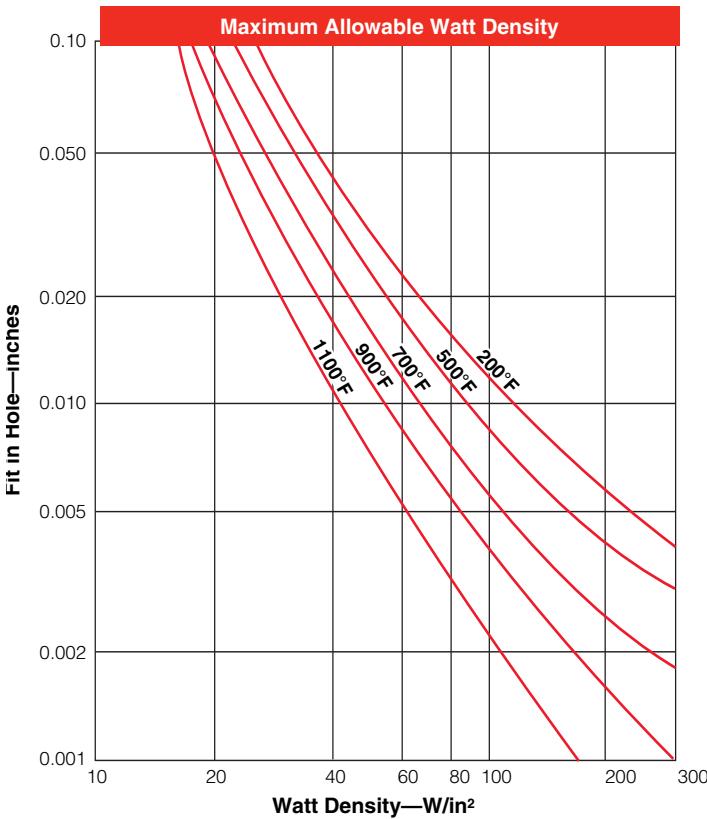

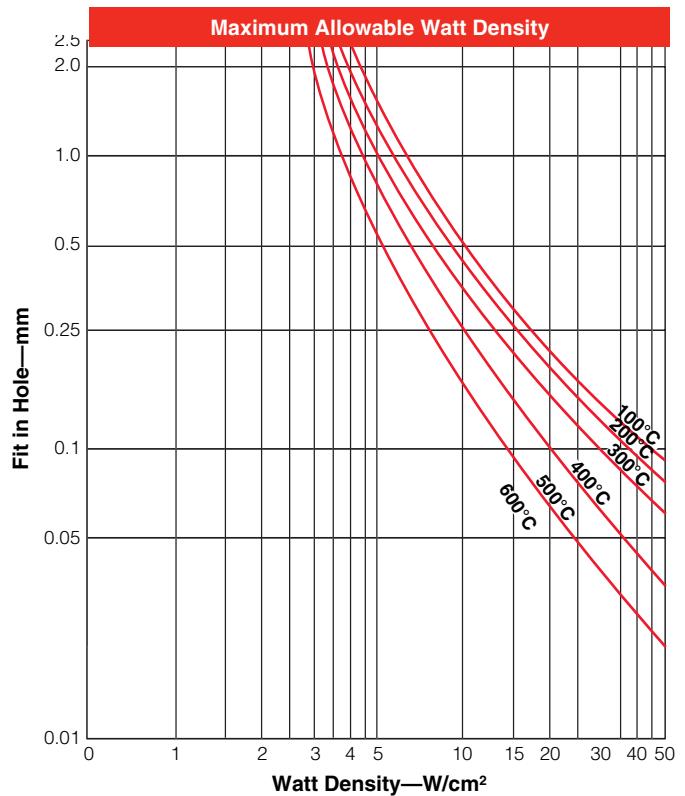

Tolerances

Diameter: -0.02 mm, -0.08 mm
(-0.0008 inch, -0.0031 inch)

Length: ± 3 percent with ± 2.4 mm
($\pm \frac{3}{32}$ inch) minimum

Resistance: +5 percent, -10 percent. Resistance is measured at room temperature following first heater operation.

Wattage: +10 percent, -5 percent. Wattage decreases approximately 5 percent with temperature. Wattage tolerances are for heaters at operating temperature.

Maximum Wattage @ 400V	—	—	—	3040/5000	3040/5000	5000

① On certain lead construction, maximum amperage is 3.1. Please consult Watlow.

② On certain lead construction, maximum amperage is 7.6. Please consult Watlow.

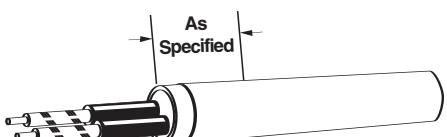

Termination Options

Crimped-on Lead

Crimped-on leads with a 6 mm ($\frac{1}{4}$ inch) unheated section are recommended for applications where the lead wire temperature does not exceed 250°C (480°F).

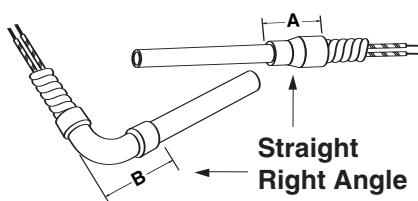

Unless a longer length is specified, 250 mm (10 inch) leads will be supplied. To order, request **crimped-on leads** and desired lead length.

No-Heat Zone

An unheated section can be used to extend the leads safely into a cool zone in a high temperature

application. Leads should be kept below 250°C (480°F) for maximum service life. To order, specify **no-heat zone** and length of unheated section.

Galvanized Conduit

Flexible galvanized conduit can be installed over the leads for abrasion protection. It is attached with either a straight or 90 degree elbow copper coupler. The copper coupler

overlaps the heater sheath by 6 mm ($\frac{1}{4}$ inch). A no-heat section is required. To order, specify **galvanized conduit, straight** or **right angle**.

Stainless Steel Hose

Stainless steel hose also protects leads against abrasion. It is attached with a straight or 90 degree elbow copper coupler. The copper coupler overlaps the heater sheath by 6 mm ($\frac{1}{4}$ inch).

It can also be swaged-in straight or silver soldered to the heater sheath at a right angle. A no-heat section is required. To order, specify **stainless steel hose, straight** or **right angle with copper coupler, straight swaged-in** or **right angle silver soldered**.

Galvanized Conduit and Stainless Steel Hose Dimensions

Heater Diameter mm	Minimum No-Heat Length mm (inches)	Dimension A mm (inches)	Dimension B mm (inches)	Galvanized Conduit O.D. mm (inches)	Stainless Steel Hose O.D. mm (inches)
6.5	12 ($\frac{1}{16}$)	22 ($\frac{1}{8}$)	29 ($1\frac{1}{8}$)	10 ($\frac{1}{8}$)	5.6 ($\frac{1}{16}$)
8	12 ($\frac{1}{16}$)	22 ($\frac{1}{8}$)	29 ($1\frac{1}{8}$)	10 ($\frac{1}{8}$)	6.5 ($\frac{1}{4}$)
10	14 ($\frac{1}{8}$)	22 ($\frac{1}{8}$)	29 ($1\frac{1}{8}$)	10 ($\frac{1}{8}$)	7.2 ($\frac{5}{16}$)
12.5	16 ($\frac{1}{8}$)	28 ($1\frac{1}{8}$)	30 ($1\frac{1}{16}$)	14 ($\frac{1}{8}$)	9.5 ($\frac{1}{8}$)
16	19 ($\frac{1}{8}$)	28 ($1\frac{1}{8}$)	34 ($1\frac{1}{8}$)	14 ($\frac{1}{8}$)	12.7 ($\frac{1}{8}$)
20	22 ($\frac{1}{8}$)	29 ($1\frac{1}{8}$)	36 ($1\frac{3}{16}$)	16 ($\frac{1}{8}$)	15.9 ($\frac{1}{8}$)

Dimensions are shown for designs with copper coupler only.

Stainless Steel Braid

Like stainless steel hose, stainless steel braid also protects against abrasion. Stainless steel braid is swaged-in straight or crimped-on to the heater at a right angle. Metal

braid is recommended when excellent flexibility with good physical protection is needed. A unheated section is required. To order, specify **stainless steel braid, straight or right angle**.

Swaged-in Flexible Lead

Swaged-in flexible leads, with a silicone-fiberglass insulation, are recommended for applications in which the leads must be bent at the exit point from the heater. Unless longer length is specified, 250 mm (10 inch) leads are supplied.

Heaters 140 mm (5 1/2 inches) or shorter generally have a six mm (1/4 inch) no-heat section. Heaters to 250 mm (10 inches) require a 25 mm (one inch) no-heat section. Heaters greater than 250 mm may require more than a 25 mm no-heat section. To order, please specify **swaged-in flexible leads**.

Moisture Resistant Seal

Silicone rubber moisture resistant seals can be provided at the lead end to virtually seal the heater. This seal is rated to 230°C (450°F) continuous operation.

A 25 mm (one inch) no-heat section is required at the lead end. Solid pin leads exit through the seal with

crimped-on silicone rubber insulated lead wires and silicone rubber sleeves that extend into the seal. Swaged-in leads are also an option where flexibility at the lead exit is required. To order specify, **silicone rubber moisture resistant seal** and either **crimped-on** or **swaged-in leads**.

Threaded Fitting

Either brass or stainless steel threaded fittings for screw-in mounting can be added to units that have moisture resistant seals. Available dimensions are shown on the *Threaded Fittings*

charts. To order, please request **brass** or **stainless steel threaded fittings** and location on the heater.

Note: For liquid immersion applications, please also specify heavy weld end disc.

Style A

Style B

Style C

Thermocouple Types

Internal Thermocouple

Style A is used to evaluate heat transfer efficiency of an application. The junction is located in the heater core to monitor the internal temperature of the heater.

Style B approximates part temperature, and is available in all diameters. The thermocouple junction can be in contact with the inside of the heater sheath, located in the 13 mm (1/2 inch) no-heat

section anywhere along the heater length.

Style C is useful in applications where material flows past the end of the heater. This junction is embedded in a special end disc. Type C is available only on 6.5, 8, 10, 12.5 and 16 mm diameter units.

To order, specify **internal thermocouple**, **Style A, B or C** and **thermocouple ASTM Type J, T, K or E**. If not specified, 250 mm (10 inch) thermocouple leads are supplied.

For other ASTM types, contact Watlow.

How to Order

To order stock AB cartridge heaters, please specify:

- Code number
- Termination options, and length of leads

For **made-to-order** units, please specify:

- Diameter
- Overall length
- Watts
- Termination options, and length of leads

Availability

Stock: Next day shipment

Made-to-Order: Shipment within three weeks
